

## SHARE YOUR PERSONALITY

When out and about, listening to your music on your iPod, iPhone, or other MP3 player is a personal experience. In fact, the whole concept, dating back to a portable cassette player, is based on individuality and personality.

Today, more and more people have uncovered the pleasure in sharing their own personality with others, using their individual music player as a common source. And the new Tangent ALIO music system makes it a lot easier to do so.

Leading the way is the Tangent ALIO stereo solution, featuring five sound sources and two powerful 3" speakers. The single-speaker variant features the same sources as the Tangent ALIO stereo, but its smaller dimensions let it be placed flexibly, slipping onto a bookshelf or nightstand with ease. The ALIO single-speaker provides sound performances that are normally reserved for much larger radios. The single 3.5" speaker unit located at the top of the solid cabinet makes it possible.

This sound centre offers a simple solution to spreading your music. Choose between an external iPhone or iPod, and connect via the built-in docking station. Certified as a "Made for iPhone" product, the Tangent ALIO seamlessly recognizes your Apple product, and begins playback through its powerful built-in speaker. Or jump over to the newest, high-quality Digital Audio Broadcasting band, DAB+, via the DAB+ receiver. It too, is built-in, along with an FM tuner and CD player. You can also connect a final source through the AUX jack on the rear.

If that wasn't enough for you, Tangent ALIO is loaded with additional features. The loudness and equalizer pre-sets can be employed as you wish, adjusting the soundscape to fit your personal preferences.
